OUR PARTNERS & CUSTOMERS

Our Partners constitute the backbone of our Operations

Our relationship with our Business Partners is built on values of mutual cooperation and respect. Forging successful relationships with our Business Partners is essential for supporting the expansion of our Customers' business and driving India's communication revolution forward.

We work with a dynamic and a diversified pool of Partners who look after everything from provisioning of equipment, managing third-party logistics to warehouse operations and providing 24x7 support. Running such an extensive and dependent structure calls for proactive and responsive communication lines with all our Partners. This is ensured through our Contract Governance Programme.

QUALITY POLICY

CORPORATE GOVERNANCE:

Governance structure

We take strategic direction from the Board of directors. The chief executive and the executive management committee are responsible for overseeing the company's day-to-day operations and implementing the Board's decisions. Day-to-day responsibilities of the Group are delegated to management, under the overall leadership of the chief executive officer, who regularly reports to and interacts with the Board and board committees as well as the managing directors of the operating groups. A delegation of authority framework has been implemented within all operating groups to sub-allocate the accountability of the Board and executive

We have witnessed focused efforts by the Government of India on maximising the reach of broadband and enabling higher speeds in order to increase internet penetration. It has been our continuous endeavour to help build capacity in this direction. As a pioneering step, we have a dedicated team to work towards research on helping India meet the challenges of higher data transmission speed and capacity demands. Our core Partnership with the test Labs and testing facility have enhanced our capabilities in the implementation of optical fibres and optical fibre cables to service the ever-increasing global demand for bandwidth.
